GRIPLOCK® SYSTEMS

AIRCRAFT CABLE & FITTINGS

Description

Aircraft Cables & Fittings are available as either galvanized or stainless steel. Use the information below to create the part # for the cable you need. Use the Weightload Chart to make sure the cable and gripper are compatible.

Griplock® cable assemblies are available in 7x7 or 7x19 galvanized or stainless, medium-to-high tensile strength aircraft cable. These assemblies are factory fitted with a variety of die-cast zinc, swaged aluminum, swaged copper or swaged steel terminals. Unless specified, Griplock terminals are guaranteed to the full published break-strength of the cable, however, when used in conjunction with grippers, cables will have a break strength that is less than the break strength of the cable alone. Please refer to the Installation and Weight Load Guidelines.
